

Press Release

KSEI Launches Newest Generation of AKSes Facility

Jakarta, May 20, 2019 – Today (5/20), the Indonesia Central Securities Depository (KSEI) launched the newest generation of its AKSes (Integrated Security Ownership Reference) facility, dubbed the AKSes Next Generation (AKSes Next-G). The launching ceremony was presided by the Financial Services Authority's (OJK) Deputy Director for Securities Institution Supervision Ridwan, accompanied by KSEI's Board of Directors and Board of Commissioners, and witnessed by the Directorate General of Financial and Risk Management's Director for Government Bonds Loto Srinaita Ginting, the Boards of Directors and Commissioners of Self-Regulatory Organizations (SRO), invited guests, and media partners.

The AKSes facility itself is a facility provided by KSEI to enable capital market investors to directly monitor securities ownership portfolios and/or funds deposited in Client Fund Accounts, as well as to increase information transparency and investor protection. The AKSes facility was first launched by KSEI in 2009 under the name of *Investor Area*.

The AKSes facility's development was prompted by investors' need to monitor investment portfolios in the Indonesian Capital Market directly through KSEI as the country's Central Securities Depository and Investment Institution. Through the AKSes facility, investors can compare the account statements provided routinely by Securities Companies and Custodian Banks with the data recorded in KSEI. This effort is crucial in guaranteeing that investors' investment portfolios match with the Sell/Buy instructions they provided to Securities Companies and Custodian Banks.

The development of AKSes Next-G is one of KSEI's initiatives which is a part of KSEI long-term strategic plan's multi-year projects. The upgrade to the AKSes facility will add various new and interesting features aimed at increasing the number of AKSes facility users. As of the end of 2018, the number of investors that have use the AKSes facility is still less than 12%. This is due to several issues including the need for AKSes Card and pin code physical documentations for the registration process, as well as the very limited features in the previous version of AKSes.

"One of the main reasons why KSEI developed AKSes Next-G is due to the low usage of the AKSes facility and the need among investors for an easier and quicker login process. Previously, to use the AKSes facility investors must first receive the AKSes Card and Pin Code. This takes time as they are physical documents which need a distribution process. With AKSes Next-G, you only need personal data to login," stated KSEI President Director Friderica Widyasari Dewi.

The investor registration process for AKSes Next-G, at website address: <https://akses.ksei.co.id>, is much more easier as it only requires a National Identity Number (NIK) for local investors, a passport number for foreign investors, or a *Single Investor Identification* (SID) number for institutional investors, in addition to other data such as name, email address, and a mobile phone number. The registration process also verifies the data that

is inputted with the data recorded in KSEI's main system (C-BEST or S-INVEST) so only investors that have opened a Securities Sub-Account or Investment Account are able to log into the AKSes Next-G facility.

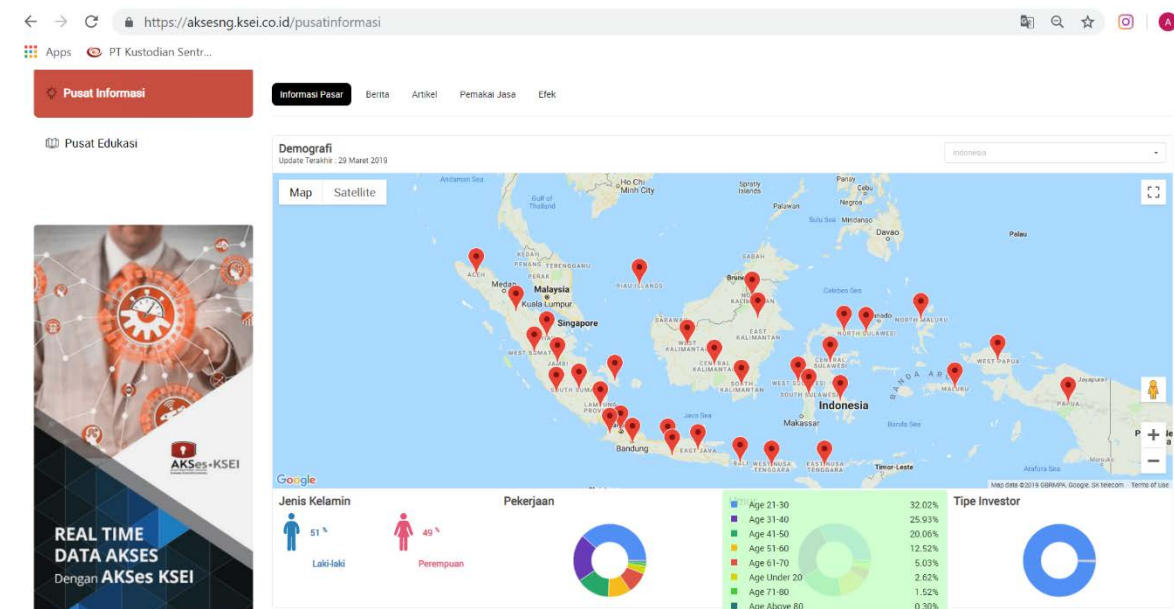

Users input personal data → Activation link sent to email → Users create password → Users can login

Friderica added that, "The AKSes Facility's new look has also been designed to be more attractive with a focus on its landing page and menus. In its landing page, AKSes facility users can view capital market statistical data and information from financial industry news articles. For more specific data, they can also access the 'Information Center' menu. This is a special menu as it provides regional investor data in Indonesia, down to the municipal level, that can be accessed by the general public."

As its name implies, the *Acuan Kepemilikan Sekuritas* (Securities Ownership Reference) or AKSes Next-G will not be complete without a facility to monitor investors' investment portfolios. And thus, investor portfolios can be monitored through the AKSes Next-G's 'My Portfolio' menu. As an improvement to its previous predecessor, AKSes Next-G is now able to display investors' investment portfolios in the form of categorized tables and diagrams for each investment.

AKSes Next-G was developed by adopting the latest technologies and best practices for ease of management and expansion. This provides KSEI with the ability to easily add new features into AKSes Next-G in the future. Through the development of AKSes Next-G, it is hoped that KSEI will be able to provide features that are not limited to the transfer of investors' assets but

also to add new services for other capital market stakeholders and lay the groundwork for KSEI's vision of becoming a Financial and Information Hub.

With a total number of capital market investors that have reached 1,891,601 as of May 2019, KSEI hopes that more investors will utilize the AKSes Next-G facility as it believes that intelligent investors are investors who are not only able to trade intelligently, but also able monitor their investment intelligently.

Expanding the user base of AKSes Next-G will not only benefit capital market investors but also benefit other KSEI stakeholders such as Securities Companies, Custodian Banks, Issuers, Investment Managers, and Selling Agents as the AKSes facility will also be integrated in the future with other systems such as the Issuers' Area, ORCHiD, and the e-Proxy and e-Voting platform.

For the launching of AKSes Next-G, KSEI collaborated with PT Phintraco Sekuritas and PT MNC Sekuritas to organize a joint login event between May 1 and 19, 2019 in several cities in Indonesia. The joint login event managed to set a new Indonesian World Records Museum (MURI) record as the Most Logins by Investors into a Capital Market Application which was achieved by 6,825 investors logging into the AKSes Next-G facility and breaking the previous record of 3,051 investors.
